

GoalTrick: The On-Chain Social Network for Football Talent

What is GoalTrick?

GoalTrick is a decentralized social network built to give visibility and power back to amateur and semi-professional football players. Developed on top of the Sportiverse blockchain, it enables athletes, clubs, and agents to connect, track careers, and execute secure transfers – all recorded transparently on-chain.

In the traditional football ecosystem, players are often invisible unless they are already part of a major club. GoalTrick changes that. Every post, match stat, or contract builds your verifiable reputation – owned by you, not by an algorithm or agency.

Why GoalTrick Exists

Football is the world's game – but access to opportunities remains unfair and centralized:

- Talents from favelas and communities, rarely reach visibility
- Transfers and scouting often rely on opaque intermediaries
- There's no trusted standard for athlete data and career verification

GoalTrick is the infrastructure to fix this:

- Gives athletes the ability to own their sports identity
- Enables coaches and clubs to scout based on trusted, verifiable data
- Empowers communities to validate performance
- Removes the need for middlemen

With Sportiverse's blockchain layer underneath, every action is traceable, interoperable, and censorship-resistant.

Functionalities & Modules

Available in MVP

- Blockchain-integrated login: secure, wallet-based access
- Social Feed: post videos, images and text
- Likes, comments, and interactions: recorded on-chain
- Smart transfer request: pulls real-time data from blockchain
- Integration with AI contract agent: generates legal template documents for player transfers
- Public profile pages: players build a transparent on-chain reputation
- Entity system: coaches/clubs can register organizations and manage talent

Planned Features (Roadmap)

- Direct messaging (chat) + auto-document generation (via DeAI)
- Player discovery tool: advanced user search with acquisition filters
- Notifications on player transfers of interest
- Data abstraction module: to present complex blockchain data in human-readable ways
- User identity verification with DeAI: confirms the human behind the account over time
- Boosted profile visibility via SPORT token
- Recommendation engine for verified users (future phase)

Who is GoalTrick for?

Players

- Build a reliable career history

- Showcase talents through media, stats, and performance
- Get discovered globally without agents

Coaches & Scouts

- Validate performance data
- Register and follow players through on-chain history
- Access or initiate smart transfers transparently

Academies, Schools, and Clubs

- Register as official entities
- Publish opportunities and manage their squads

Developers

- Access the public API for building new sport dApps
- Integrate data with fantasy leagues, analytics tools, and more

Technical Stack

GoalTrick is being built using:

- Cosmos SDK (Sportiverse): for modular blockchain architecture
- CosmWasm: for smart contracts (transfers, profiles, identities)
- AI Agent (DeAI): to automate legal document generation and verification
- SPORT Token: used for profile boosts, transfer fees, and economic incentives

Implementation Status (Q2 2025)

GoalTrick WebApp

- Login system integrated with blockchain wallet
- Post, comment, like – connected directly to smart contracts
- Profile data read and written via blockchain API
- Legal contract generator AI live and integrated

Sportiverse Blockchain

- Blockchain data API live
- Core modules for transfer, entity, and identity created

The platform is live in MVP mode and evolving rapidly. All features above are either functional or on the near-term roadmap.

Roadmap

Q3 2025

- Entity onboarding campaign (clubs & academies)
- Launch of in-platform transfer NFT minting
- Profile reputation scores (on-chain)

Q4 2025

- Launch of DeAI full verification model
- Public SDK and open data API

Q1–Q2 2026

- On-chain marketplace for tests, trials, and visibility boosts
- Community governance features

- Tactical simulation tool prototype for coaches
-

Why GoalTrick is a Game-Changer

GoalTrick is the first platform to turn a football player's journey into a **transparent, validated, portable reputation**. This levels the playing field and creates access to opportunities on merit – not connections.

It's also a foundation layer for building scouting dApps, simulation games, agentless contracts, and open career passports for athletes.

Backed by Sportiverse, it's 100% on-chain, community-focused, and designed for global scalability.
